

For a simple fully featured load indicator the Loadwise 317 is the right choice; if you think you may want to add angle or other capabilities in the future we invite you to consider our fully upgradeable Model 600 microprocessor system.

Key features include: -

- Digital display of load on the hook
- Operator adjustable HIGH load limit with visual and audible warnings
- Adjustable maximum line pull limit
- Display of load in pounds or kilograms (x 1000)
- Parts of line adjustment for 1 to 99 falls
- Test push to check the display, audible alarm and motion cut
- Override push button to deactivate the alarm and motion cut
- Anti 2 block (A2B) overhoist limit facility when the optional limit switch assembly is fitted -

Loadwise Model 330

- Displays "OVERHOIST" message on the display and operates a motion cut relay when activated

The 317 is usually combined with a Loadwise running line dynamometer load sensor selected according to rope diameter, line pull and application. Alternative load sensors are described in the sensors section of our web site.
