

Loadwise have a comprehensive range of standard products to monitor rope movement. Hardware and software solutions can also be generated to meet your specific requirements. Applications include:

- Last Winding switches
- Rope movement (Main & Auxiliary winch)
- Rope speed
- Rope payout/distance
- Custom engineered

Key Benefits:

- A wide range of standard solutions

- Advanced technology
- Approved to all known standards
- Built in reliability
- Cost effective

LOADWISE LAST WINDING SWITCH - DON'T RUN OUT OF ROPE ON THE WINCH DRUM!

The Loadwise last winding switch is designed to provide a simple solution to meet the requirements of various standards including the United Kingdom L.O.L.E.R. regulations-1998 in respect of personnel carrying equipment.

The device has a heavy duty nylon roller mounted on an adjustable spring loaded arm that follows rope movements on the winch drum, when the minimum permissible number of rope wraps are left on the drum a switched (open) contact is made and this can be used to operate the appropriate alarm or motion cut function.

Typical applications:

- Mobile cranes
- Winches
- Lifting equipment

Key features:

- Simple & easy to install
- Reliable
- Robust construction
- Low maintenance
- Low Cost
